

Briefly

The background features several thin, light blue lines that intersect and branch out across the dark blue field. Small circular dots, also in light blue, are placed at various points along these lines, creating a network-like or data-path aesthetic.

AI powered Meeting Intelligence

Transcribe · Summarise · Act

Team Bearly Asleep

Hackathon presentation - May 11, 2026

The Crisis of Inefficient Meetings

Data Loss at Scale

Professionals spend **23 hours a week** in meetings. Without dedicated note-takers, critical insights evaporate within 24 hours.

Execution Bottlenecks

Teams lose track of **40% of action items**. Discussions rarely translate immediately into trackable, actionable workflows.

The "Awkward Bot" Problem

Current market solutions rely on intrusive third-party bots that join calls, disrupting meeting flow and raising privacy concerns.

Global Communication Gaps

In distributed teams, **key context is often lost** when meetings are conducted in non-native languages.

Why Briefly? (Our Value Proposition)

Zero Friction

Records silently in the background using Chrome's native **tabCapture** API. No bots, no invites, no separate apps.

Multilingual Focus

Generate structured notes, action items, and summaries instantly in **English, Bengali, or Hindi**.

Ready to Execute

We don't just transcribe. Briefly automatically extracts **Jira tasks, calendar deadlines, and architecture diagrams**.

Under the Hood: Gemini 3.1 Data Extraction

Our backend utilizes **Google Gemini 3.1 Flash Lite** to process WebM audio streams. It enforces a strict, reliable JSON output structure:

- **summary**: A concise executive overview.
- **action_items**: Extracted tasks assigned to individuals.
- **decisions**: Final conclusions and consensus.
- **mermaid_diagram**: AI-generated architecture code.
- **calendar_events**: Mapped ISO-8601 deadlines.
- **transcript**: Full forensic record of the call.

**Outputs are translated into the user's selected language on the fly via prompt engineering.*

The "Wow" Factor: Engineering Workflows

Auto-Architecture Generation

When teams discuss workflows, Briefly generates **Mermaid.js code** and instantly renders it as a visual flowchart in the side panel.

(Includes 1-click export for technical documentation.)

One-Click Jira Integration

Transform a spoken sentence into a deployable ticket. Our `/generate-ticket` endpoint outputs:

- **Title** (Professional standard)
- **Description** (Historical context)
- **Acceptance Criteria** (Actionable conditions)

Intelligent Context: Local & Global Chat

Briefly acts as a localized RAG (Retrieval-Augmented Generation) system, utilizing `chrome.storage.local` to make your meeting history conversational.

Meeting Chat (/chat)

Query the **current active meeting**.
"What did the client say about the API rate limit during this call?"

Global Chat (/chat-global)

Query **across all historical meetings**.
"Summarize everything we decided about the database migration across all meetings this month."

System Architecture Workflow

Enterprise-Grade Fault Tolerance

Our backend is designed to never fail silently. We built a 3-Layer Safety Net:

Layer 1: Auto-Retry

Using `HttpRetryOptions`, the API automatically catches 429/503 rate-limit errors and retries with exponential backoff.

Layer 2: Async Polling

Safely handles Google Cloud processing delays by polling the Gemini `PROCESSING` state before executing prompts.

Layer 3: Strict Janitor

Immovable `finally` blocks guarantee that temporary `.webm` artifacts are instantly purged from servers to protect privacy.

Live Demo Flow

Watch Briefly in Action:

1. Open a live **Google Meet** session.
2. Click the **Briefly** Extension icon.
3. Select Output Language (e.g., Hindi).
4. Click **Start AI Recording**.
5. Simulate a technical discussion.
6. Click **Summarize** & View results: →
Localized Summary & Tasks
→ Rendered Mermaid Diagram
7. Generate a **Jira Ticket**.
8. Query the **Global Chat**.

Key Evaluation Points

- Zero impact on call audio/quality.
- Speed and accuracy of Gemini's structured response.
- Precision of the extracted Jira Acceptance Criteria.
- Premium, distraction-free UI.

Thank You!
